IAADent Advanced Periodontics Course 2027

This is an advanced theory and clinical training program for general dentists looking to expand their knowledge in periodontology and to provide periodontal treatment to their patients. It is designed so you can immediately implement periodontal procedures into your general practice safely and successfully. The education delivered is based on a complete review of the literature on Periodontology driven by the highest level of evidence-base with a focus on minimally invasive surgical techniques. As a course taught by a General Dentist to General Dentists, it ensures you gain insight into what works in General Practices.

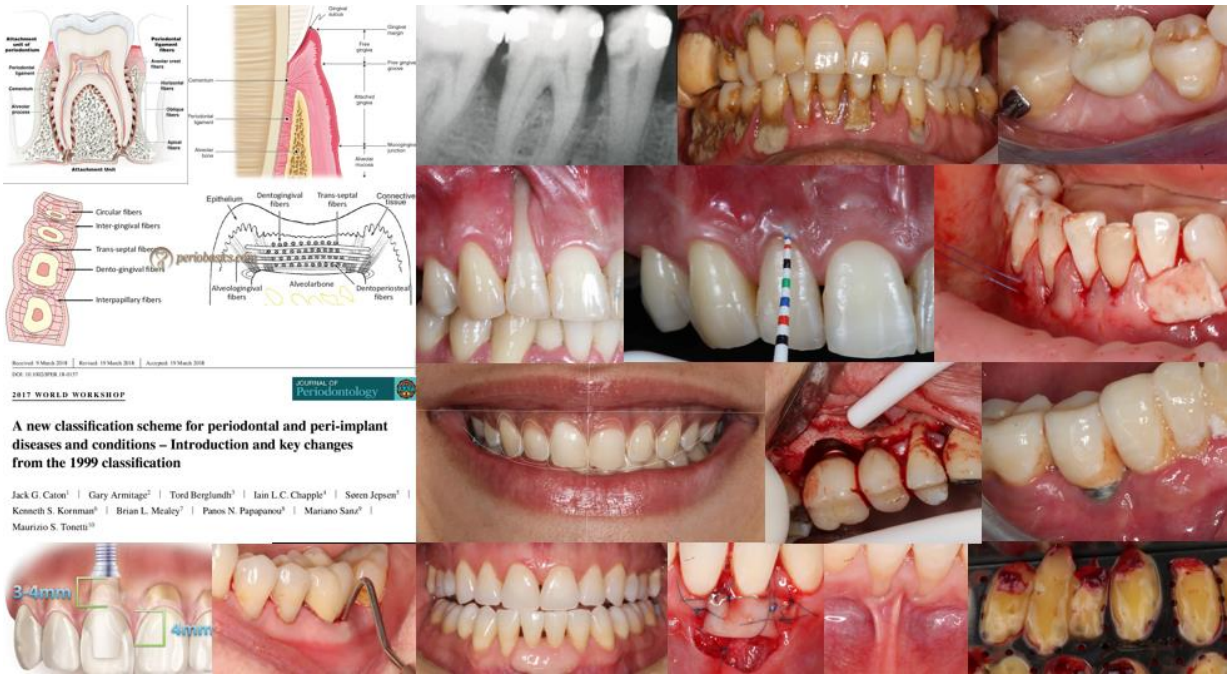

The 2027 course has been revamped with even more hands-on training!

Session 1: 5-6th March 2027	Periodontology 101 & Non-Surgical Management
Session 2: 9-10th April 2027	Surgical Periodontal Management & Crown Lengthening
Session 3: 25-26th June 2027	Regenerative Therapies & Autotransplantation
Session 4: 30-31st July 2027	Soft Tissue Plastic Surgeries & Phenotype Modification
Session 5: 3-4th September 2027	Recession Coverage & Perio-Restorative Interface
Session 6: 22-23rd October 2027	Peri-implant Disease Prevention & Management
Session 7: 3-4th December 2027	Peri-Implant Soft Tissue Plastics

All sessions will start at 9:00AM (Registration starts at 8:30AM). Lectures will finish at 5:00pm with case reviews to follow.

Location: Sydney NSW (Venue TBC)

Registration: For registration or enquiries, visit iaadent.com or email admin@iaadent.com

NOTE: All dates are subject to change. During the course, there could be some changes to the dates/venue/some contents. Should this happen, you will be notified via email in advance, regarding the date/venue change.

DR SHENG ZHANG

BDS (Adelaide University, University Medal), BOH (Sydney University)
MDScImplantology (UJI), GradDipOrtho (JCU)
FRACDS, FIDIA, FIADFE

General Practitioner with practice limited to periodontics and implants.
Principal Dentist at Dental Artistry, a General Dental practice in Auckland with a focus on implants, periodontics, orthodontics and cosmetic dentistry.

COURSE INFORMATION

Session 1: Periodontology 101 + Non-surgical Management

- Complete review of periodontology 101 - biology, aetiology and pathogenesis.
- Explore and develop a deep understanding for the 2017 Periodontal Disease Classification.
- Evidence based management of periodontal disease including assessment, treatment, and maintenance in general practice.
- Protocol for a team approach to managing periodontitis patients in general practice.
- Hands on clinical training with powered and hand instruments.
- Introduction to minimally invasive non-surgical periodontal therapies (MINST).
- Understanding of exact equipment setup required for your practice and instrument maintenance.
- Hands on training on periodontal models

Bring your Dental Hygienist to implement immediately into your hygiene department

Session 2: Surgical periodontal therapy + Crown Lengthening

- Surgical management of periodontal disease.
- Evidence based management of different periodontal bony defects and furcations.
- Introduction to micro-surgical techniques and minimally invasive surgical therapies (MIST).
- Cosmetic and functional crown lengthening procedures in general practice.
- The role of Digital Smile Design in achieving ideal cosmetic results in cosmetic crown lengthening.

-

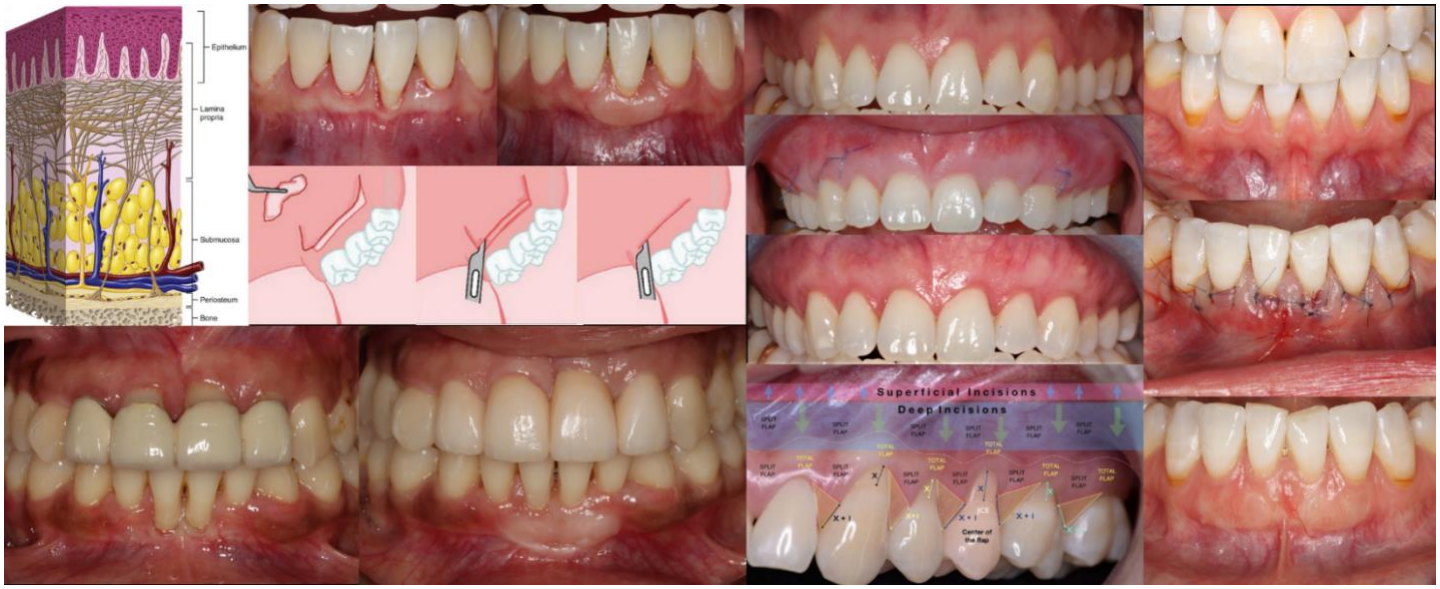

Session 3: Regenerative Therapies + Autotransplantation

- Explore the modern era of periodontal regenerative therapies.
- Understand the keys to regenerative surgery and protocol for success.
- Gain a thorough knowledge of biomaterials for regeneration and their clinical indications for use.
- Advanced microsurgical techniques including papilla preservation, minimally invasive surgical techniques, single flap approaches and entire papilla preservation flaps.
- Comprehensive management of combined periodontic and endodontically involved teeth including endodontic surgical techniques.
- Introduction to the biological basis for Autotransplantation and predictable treatment protocols.
- Hands on clinical training on periodontal models.

Session 4: Soft Tissue Plastic Surgeries & Phenotype Modification

- Periodontal plastic surgery focusing on the classic mucogingival surgeries including frenectomy, apical repositioned flaps, lateral repositioning flaps, papillary flaps, free gingival grafts.
- Exposure to different sources and techniques for connective tissue harvesting.
- Hands on clinical soft tissue plastic training on Pig Jaws

Session 5: Recession Coverage & Perio-Restorative Interface

- Periodontal plastic surgeries focusing on recession coverage procedures.
- Develop an understanding of surgery involving single and multiple teeth with a focus on Coronally Advanced Flaps and Modified Tunnel techniques.
- Understand the perio-restorative interface and combining plastic surgeries with restorative treatments to achieve harmonious pink/white aesthetics.
- Understand the benefits of Biologically Oriented Preparation Technique (BOPT) and the role of vertical restorative preparations
- The critical role of orthodontic treatments with a focus on intrusion and extrusion to improve soft tissue contour for complex perio-restorative cases.
- Develop skills to manage removable prosthesis in periodontally compromised dentition using Scandanvian Design dentures

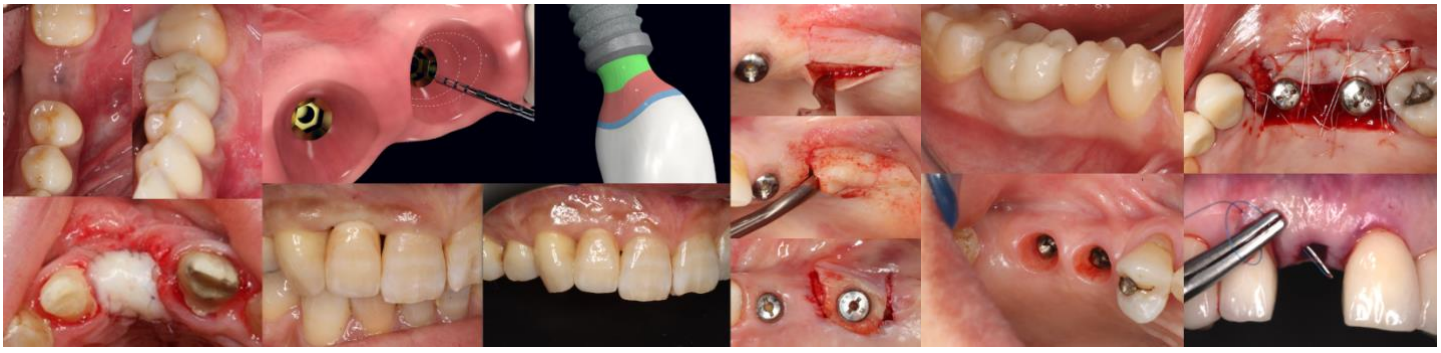

Session 6: Peri-implant Disease Management

- Identify the current knowledge on biology, aetiology, pathogenesis of peri-implant disease.
- Develop a deeper knowledge on prevention and management of peri-implant disease.
- Hard tissue and soft tissue surgical techniques for the compromised implant.
- Clinical protocols for implant maintenance in the general practice.
- Latest technologies for decontaminating failing implants.

Session 7: Implant Soft Tissue Plastics

- Identify the different time points for soft tissue augmentation to improve the dental implant outcome.
- Develop surgical skills to develop soft tissue prior to implant placement, at the time of implant placement and surgical uncover.
- Developing natural emergence profiles around implants and appreciate the importance of critical and subcritical restorative contour.
- Advanced surgical techniques for implants in the aesthetic zone.
- Hands on clinical training on implant models and pig jaws.
